	The user should see a loading screen before a title screen.	
Title Screen	The standard Play button is used with size 140 × 140 px.	☐
	On the title screen, the Play button appears only when the VO is complete.	☐
	The Play button is placed at the bottom centre of the screen.	☐
	The Play button is clearly visible against the background.	☐
	Standard Swiftee is placed on the left with the standard speaker button on the bottom with the button's size 70 px.	☐
	Swiftee's VO plays as soon as the title screen loads.	☐
	The VO should at least have the following: -Swiftee saying "नमस्ते दोस्त!" -Introduction to the Title -should be of no more than 10 seconds.	☐
	The speaker button remains disabled when the VO is spoken. Once the VO is complete, it will be enabled again. The button when disabled will be shown in a slightly greyish tone.	☐
	The Play button pulsates on the title screen immediately after the VO is complete.	☐
	When the Play button is pulsating, nothing else should move on the screen except the subtle background elements.	☐
	The standard Play button SFX is used when the user clicks on the button.	☐
General	The entire experience has one of the standard background music tracks.	☐
	The background music plays after the play button is tapped.	☐
	There should be some nudges for inactivity in the entire experience.	☐
	Inactivity nudges are activated after 7 seconds.	☐
	The standard hand nudge is used wherever a hand nudge is added in the entire file.	☐
Teaching Screens	**चलिए, शुरू करते हैं| and the Following Screens**	☐
	Standard Swiftee transition animation plays immediately after the play button is tapped.	☐
	On-screen text appears only when Swiftee says "चलिए, शुरू करते हैं|"	☐
	The standard Next button enabled is used across screens to transition unless the transition is automatic.	☐
	The Next button disabled is used till the VO and CTA for a screen is complete.	☐
	The Next button pulsates immediately after the VO and the CTA for a screen is complete.	☐
Guided Practice	**चलिए, साथ मे करें| and the Following Screens**	☐
	Standard Swiftee transition animation plays immediately to begin the guided practice section.	☐
	On-screen text appears only when Swiftee says "चलिए, साथ मे करें|"	☐
	If there are options that are coming on the screen, they should come one by one accompanied with some SFX.	☐
	The next three pointers apply only if you're using a next button in the guided pratice section:	
	The standard Next button enabled is used across screens to transition unless the transition is automatic.	☐
	When the standard Next button is displayed, it immediately starts pulsating.	☐
	The Next button disabled is used unless the VO and CTA for a screen is complete.	☐
	The standard correct feedback SFX is used.	☐
	The standard incorrect feedback SFX is used.	☐
	The standard confetti animation is used for correct feedback.	☐
	The standard confetti SFX is used for correct feedback.	☐
	Incorrect responses should trigger a wiggle.	☐
	The visual feedback for an incorrect response should never be in red colour.	☐
	Guided practice section should have some support from the first incorrect attempt itself.	☐
	There are 3 layers of feedback for incorrect responses.	☐

	The first incorrect response triggers clarification, repeats the prompt, or brings focus to the specific thing the child needs to do.	☐
	The second incorrect response gives a strong hint that provides explicit support to arrive at the answer. For example, In Hindi, this could be support with reading the options via VO. In Math, this could be a direct hint explaining the procedure of arriving at the answer.	☐
	The third incorrect response nudges the child towards the correct answer through a hand nudge, glow, or another relevant visual cue.	☐
	Incorrect responses can be locked/disabled/made unclickable in the third feedback layer.	☐
	Questions progress from lower to higher rigour.	☐
	Questions of the same type are grouped together, as long as this doesn't interfere with the rigour progression.	☐
Independent Practice	**अब आपकी बारी | and the Following Screens**	☐
	Independent practice has system-level or game-level nudges as feedback.	☐
	Independent practice is conducted through a game or a gamified activity.	☐
	The background music matches the game environment.	☐
	The game has positive/encouraging SFX added for every interaction/nudge/click.	☐
	The game background feels like an environment, not a plain screen.	☐
	The game background is minimal. It should not have too many elements, or a colour on which the elements on top are not visible.	☐
End Screen	The standard Swiftee end animation is used.	☐
	One of the three standard Swiftee end-screen dialogues is used in the VO: बहुत बढ़िया, दोस्त! तुमने कमाल कर दिया! अरे वाह, दोस्त! तुम तो छा गए! शाबाश! आज तो कमाल कर दिया! शाबाश! आपने कर दिखाया।	☐
